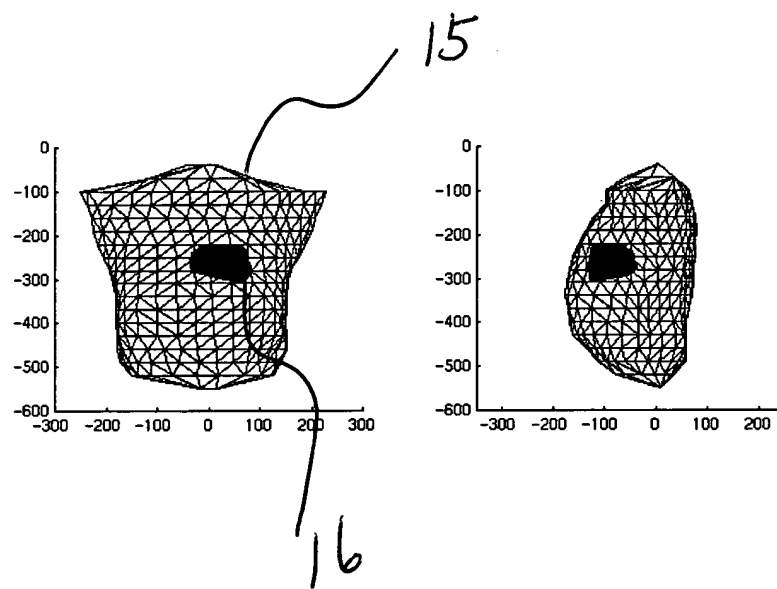

Fig. 3

Figure 1 displays three grayscale images showing the site of origin of activation for a specific neuron across different layers of a cortical area. The images are labeled "Layer 19", "Layer 23", and "Layer 24". A color scale bar at the bottom ranges from 0 (black) to 121 ms (white). Handwritten annotations include "18" pointing to a specific site in Layer 23, "17" pointing to a site in Layer 24, and "19" pointing to the color scale bar.
